

01

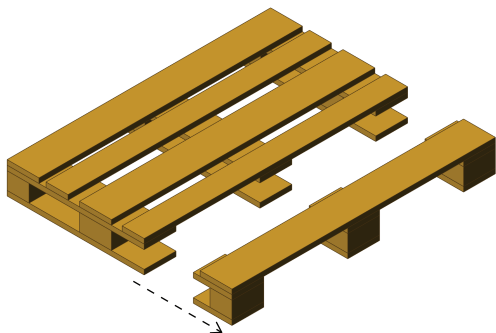

How to Transform Wood Pallets

02

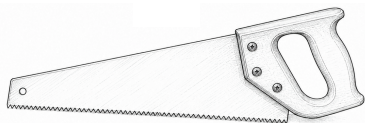

Stack two wooden pallets on top of each other, then screw or **drill** them together to hold them in place.

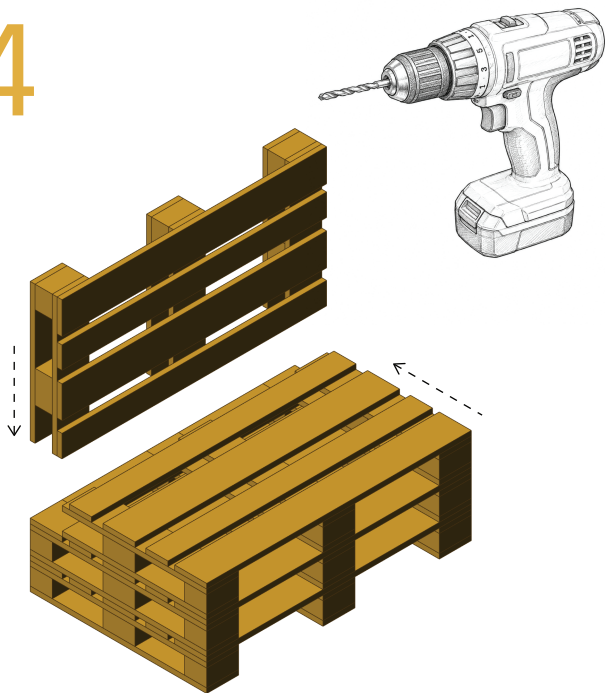

03

Use a saw to **cut** two wooden pallets by removing one 14.5 cm slat (board) from the length of each pallet.

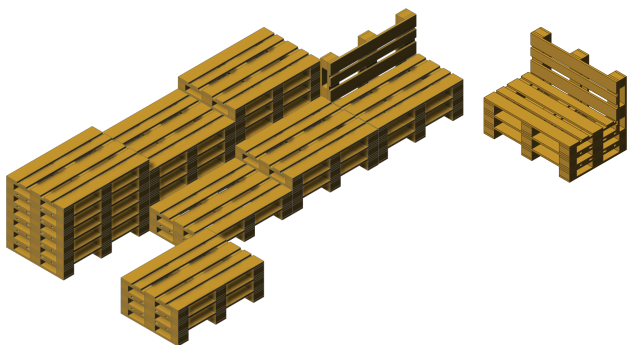

04

Place one of the cut palletes on top of the other two. Take the second cut pallet, rotate it 90 degrees, and position it to form the backrest of the bench. Screw or drill everything in place.

05

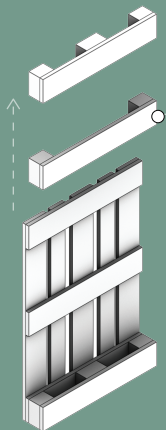

Time to get **creative**, experiment and arrange your layout however you like! You can **stack** them on top of each other without screwing or drilling them in place for flexibility.

BONUS

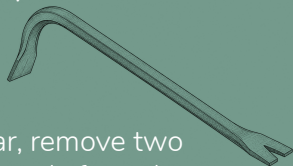

Build your planter

01 Rotate the wooden pallet

This panel will be used to close the bottom of the planter.

02 Using Crowbar, remove two sets of wooden panels from the top of a wood pallet

03 Stack and drill 2 sets of wooden panels to form a tall planter. Fill the bottom section with soil and plants
