

01

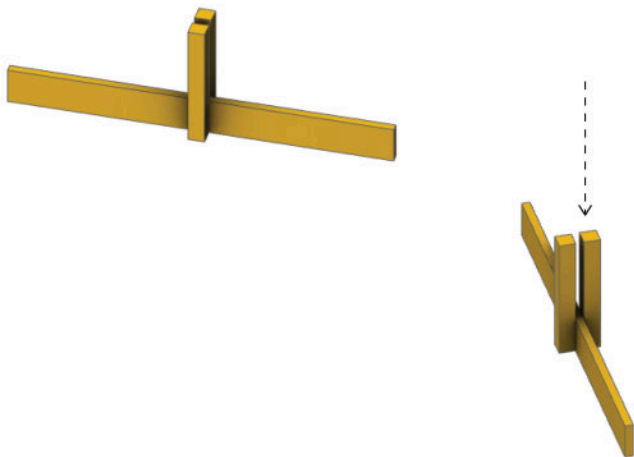

How to Make A Bench Setting

02

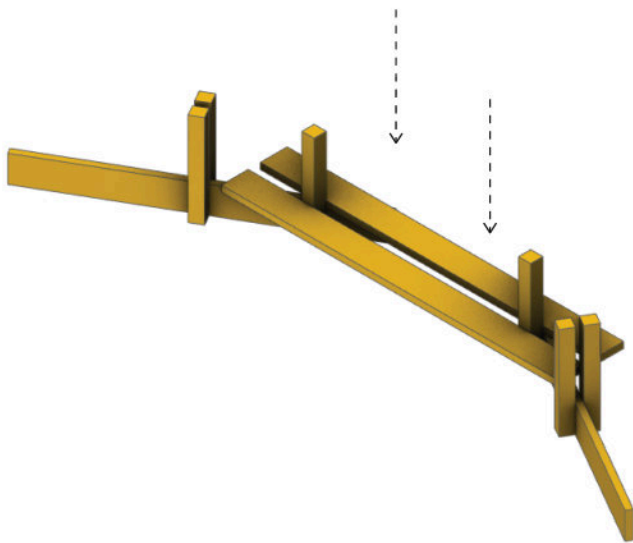

Take a **Standard Plank** (2m X 0.2m) and arrange it on 30° angle. Fix it upright between a pair of posts, creating a support.

03

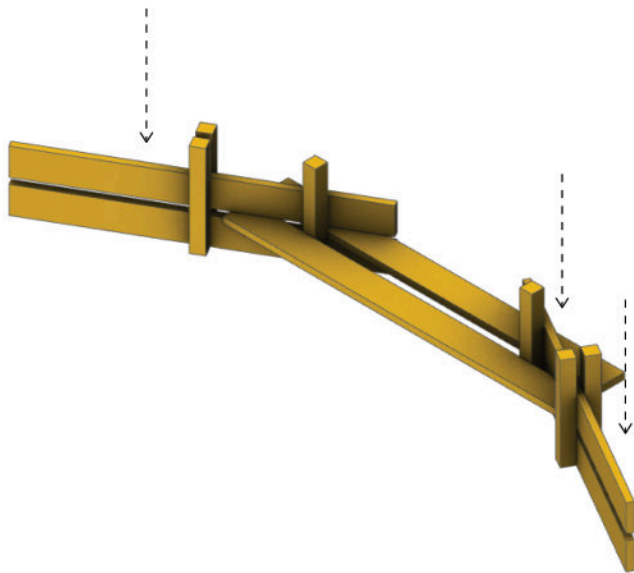

Repeat the same process for a second support.

04

Place another plank horizontally to connect the two existing supports. At the point where the plank's ends meet, stand two posts upright. Then put a second plank parallel to the first.

05

Slot two more planks on the initial two supports for greater stability.

06

Add two planks parallel to the planks of the previous step but in front of the post. These will then be secured in place in the next step.

07

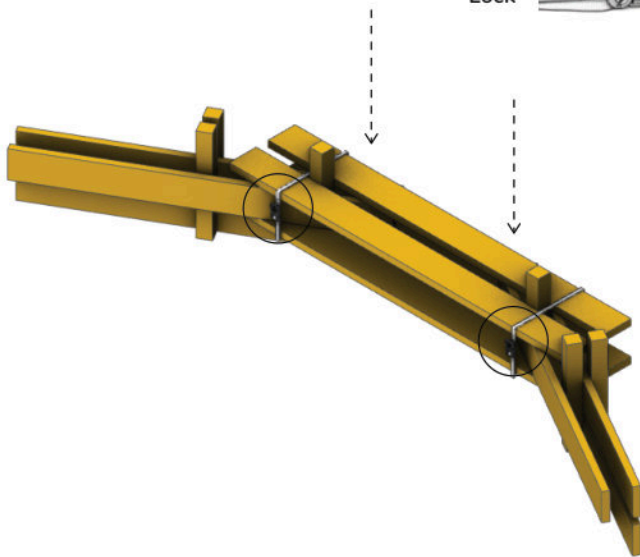

Insert

Pull

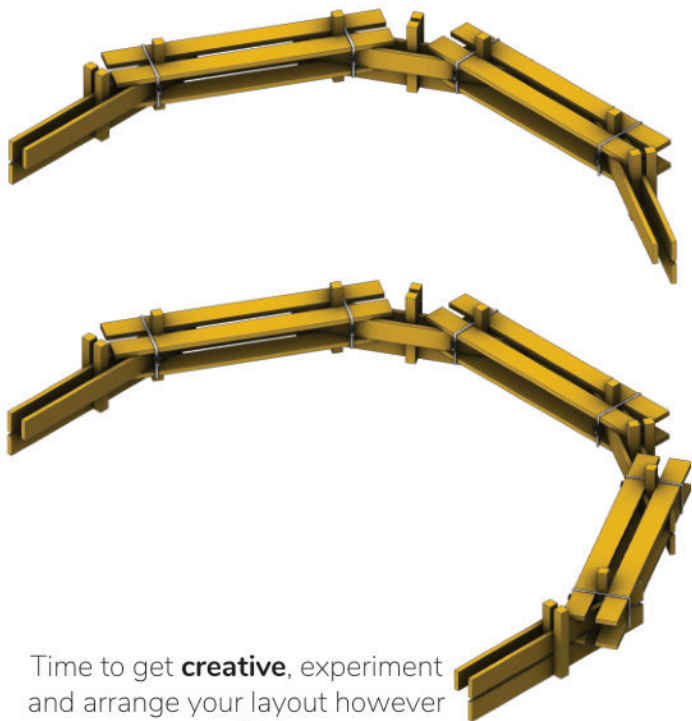

Lock

Slot two horizontal planks on top of the ones from step 4. Now secure everything with two **ratchet strap**.

08

Time to get **creative**, experiment
and arrange your layout however
you like!
