

01

How to Build A Selling Stand

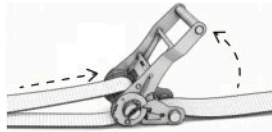

02

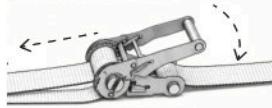

Lay the bricks side by side and stack them on top of each other until you reach your **desired dimensions of l, w & h**. Make sure every brick faces the same direction, do not rotate or flip any of them.

03

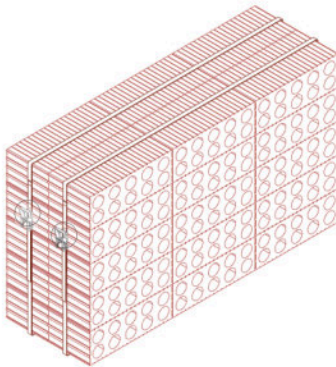

Insert

Pull

Lock

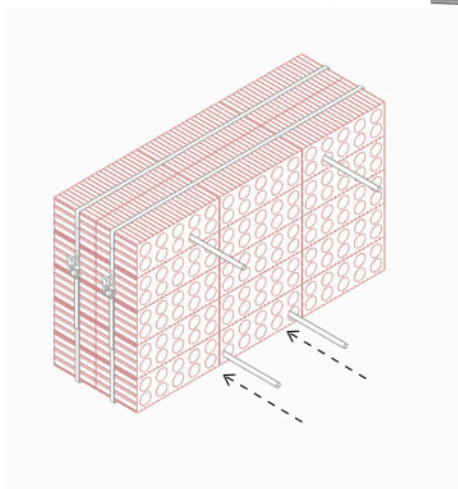

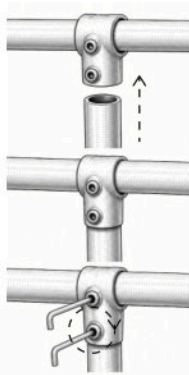

Once the bricks are laid, secure each row with one **ratchet strap**.

04

Position

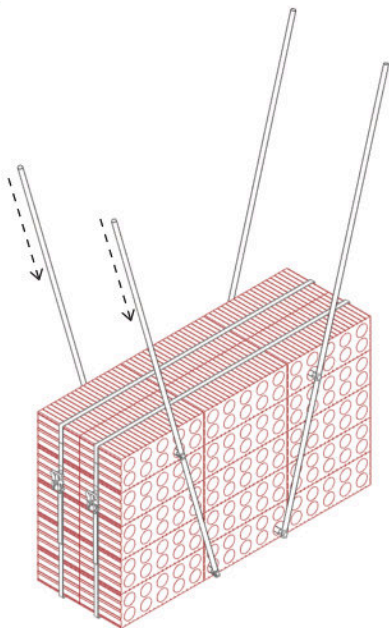

Insert

Tighten

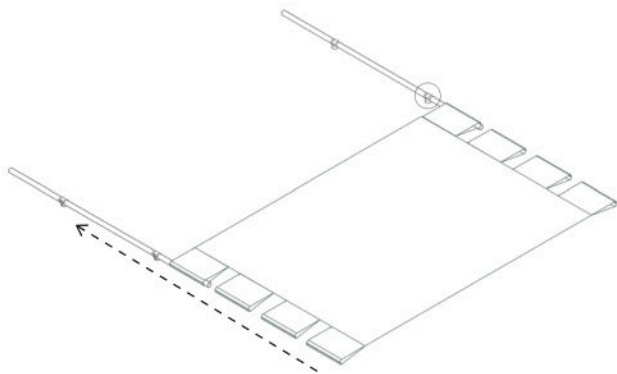

Insert horizontal tubes through the **holes** in both the lower and upper rows of bricks. For the upper row, you can either align the tube directly above the lower one using the same hole, or shift it outward for a different design.

05

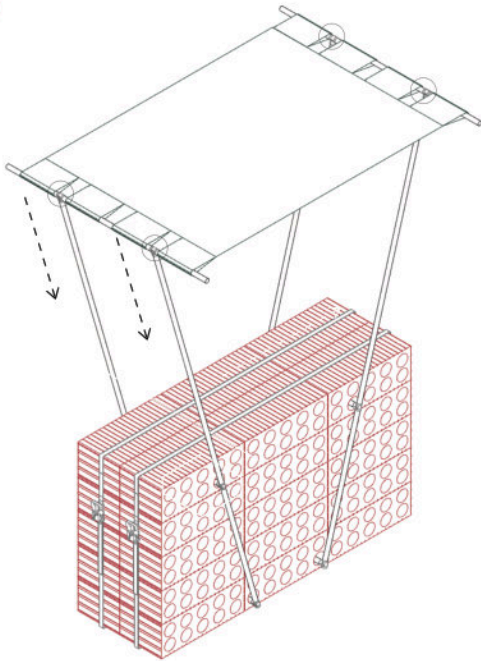

Secure the horizontal tubes with **kee clamps**, then slide the vertical tubes in and tighten the same clamps to hold them in place.

06

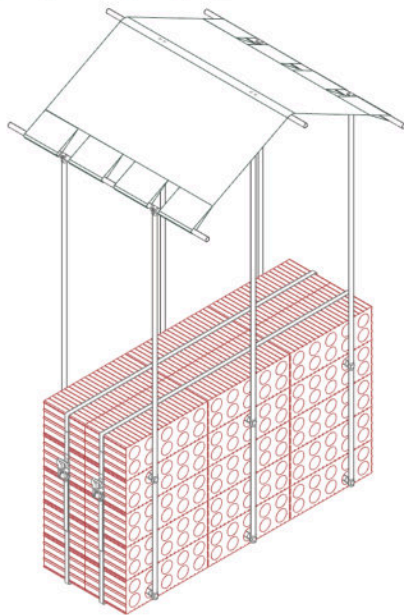

Slide the kee clamps onto the tubes, then insert the tubes through the **fabric loops** on each side to secure the fabric in place.

07

Insert the tubes with fabric into the upward-facing tubes, then secure them in place using the **kee clamp**.

TRY IT!

Feel free to try out **different variations** of the stand, add more bricks to make it longer, wider, or taller to fit your needs. You can also experiment with different roof styles, such as a pitched roof or an inverted roof.
